SUMMARY

Full Stack developer with 2+ years of experience building responsive, production-grade web applications using Next.js, TypeScript, and Tailwind CSS. Skilled in creating interactive UI components, state management with Redux/Zustand, and seamless integration with backend APIs. Strong foundation in backend technologies (Node.js, Express, MongoDB, PostgreSQL, Redis), background job processing with BullMQ and cron-based automation, and AI integrations using OpenAI for building intelligent, agentic, and scalable systems.

SKILLS

FRONTEND	Next.js, TypeScript, Tailwind CSS, Shadcn UI, Redux Toolkit, Zustand
BACKEND	Node.js, Express, Prisma, Mongoose, Sequelize, REST APIs, BullMQ, Cron Jobs
DATABASES	MongoDB, PostgreSQL, SQLite, SQL, Redis
AI & AUTOMATION	OpenAI, Agentic AI, RAG Pipelines, LLM Integrations
DevOps & Tools	Docker, CI/CD, Git, GitHub, VS Code, Postman, Figma, Firebase, Appwrite

EXPERIENCE

PRODUCT BOX | Full Stack Developer Peshawar | 2025-Present

- Built responsive, reusable UI components using Next.js, TypeScript, and Tailwind CSS for healthcare staffing and automation platforms.
- Optimized frontend performance through lazy loading, component splitting, and efficient state management.
- Integrated REST APIs to enable real-time scheduling, job matching, and multi-role data synchronization.
- Participated in backend collaboration, assisting with database queries, API design, and containerized workflows (Docker).
- Implemented CI/CD pipelines to streamline deployment and ensure frontend-backend consistency.

APPTX SOFTWARE SOLUTIONS | Full Stack Developer Peshawar | 2024-2025

- Led frontend development using Tailwind CSS and Shadcn UI, delivering consistent and responsive user interfaces.
- Managed complex application state using Redux Toolkit for multi-role SaaS workflows.
- Collaborated with backend teams using Node.js and databases to ensure efficient data handling and API integration.
- Focused on performance optimization, accessibility, and modern UI/UX practices.

PROJECTS

Omni-Connects – Booking & Management Platform

- Developed interactive dashboards for scheduling, employee management, and order tracking using Next.js & Tailwind CSS.
- Ensured responsive layouts and smooth UX across multiple roles (users, employees, managers).
- Integrated backend APIs with transaction-safe logic for consistent booking.

<https://www.omniconnects.com>

Expedient VMS – Multi-Role Vendor Management System

- Built frontend dashboards connecting hospitals, vendors, and candidates.
- Implemented dynamic tables, filters, and charts for efficient data presentation.
- Integrated backend services to support real-time updates and automated workflows.

<https://www.expedientvms.com>

Pen and Cards – AI-Driven Automation Platform

- Designed interactive UI for generating personalized notes using AI.
- Connected frontend with APIs for dynamic content rendering and workflow management.

<https://web-whisperer-96.lovable.app>

DevFlow – StackOverflow-Like Platform

- Built searchable, filterable, and bookmarkable Q&A interfaces with Next.js.
- Focused on optimized rendering and pagination to enhance performance on large datasets.

<https://dev-flow-prisma-k1r1.vercel.app/>

MotoArena – AI-Powered Car Discovery Platform

- Developed responsive car discovery UI with advanced filters and image-based search.
- Integrated frontend with backend APIs for real-time recommendations and dynamic search results.
